

# SCU Label Printing

v2.0

Quick-Start Guide - print a medication label in 4 steps

Saturday Clinic for the Uninsured

1

## 1. Enter & paste

On the **Patient & Input** tab, type the patient **Name** and **DOB**, paste the medication list into the box, then click **PARSE MEDICATIONS**.

2

## 2. Review & add Exp / Lot

On the **Medications** tab click **Review & Validate** and fix anything flagged (an **amber** Expiration cell means check the date). When prompted, enter **Expiration (MM/YYYY)** and **Lot**. For a med split across two bottles, separate values with **commas**.

3

## 3. Check what to print

Double-click the **Print?** cell next to each medication you want (or use **Check this label** in the gallery). A **green** row means it is selected.

4

## 4. Print

Click **Print Checked Labels**, confirm the list, and enter your **initials**. Any label missing Exp/Lot is **skipped and named**. When done you land on the **Log**.

### Good to know

- **Reprint Last Batch** - reprints the last set after a paper jam or misfeed.
- **Start NEW Patient** - clears the screen for the next patient (the Log is kept).
- Closing the file clears patient info and the on-screen Log; a dated CSV copy is saved to **dispense-log\** for records.
- Labels print on the **Brother QL-1100c** with the **DK-1202 (62 x 100 mm)** roll.
